

PadPak® JR

Excellent protection, convenient use

PadPak® JR turns the two-layer paper into paper cushions to be used as an exceptional padding to protect products of any shape and size during transport. Paper has an incredible ability to absorb shocks. Thanks to the use of these cushions, when a box falls to the ground, G forces are reduced by up to 90% compared to other materials, keeping the products contained inside safe from damage.

The converter is quick, easy to install or move, and requires no specific training
