

PadPak® SR

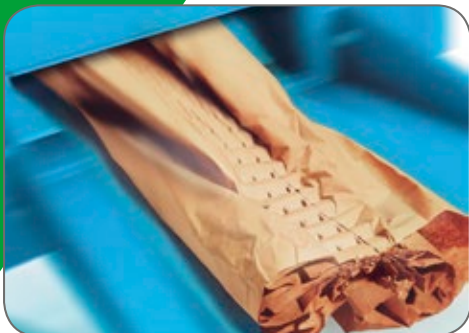

The best performance

The PadPak® SR transforms double layer paper into exceptional padding, for the protection of fragile items during transport or storage. This is accomplished through various techniques such as void filling or blocking & bracing through the creation of coils.

Paper has an incredible ability to absorb shocks. Thanks to the use of these pads, when a box falls on the ground, the G forces are reduced up to 90% compared to other materials, keeping the products contained inside safe from damage.

PadPak® SR - 7Z0002
